Performance data is based on a connected-load photometric test of MED output with 80 CRI at 4000K using a DALI driver and DIFF/F lens. Data values for all other outputs are extrapolations.

<sup>#^</sup>Performance data is extrapolated based on a 4000K setting. Cooler and warmer CCT settings will provide a slight decrease in performance – lower lm/m, higher W/m, and lower lm/W.

### LENS options

DIFF/F is a white satin, flush diffuser lens that produces smooth, even light across the lens surface.
